PROFESSIONAL SUMMARY

AI Engineer and Machine Learning practitioner with hands-on experience building LLM-powered applications, AI automation systems, and machine learning pipelines. Experienced in designing AI-driven applications that integrate large language models, vector-based retrieval systems, and backend APIs to deliver intelligent workflows and real-time insights. Skilled in LangChain-based architectures, semantic retrieval systems (RAG), and deploying ML models through scalable APIs. Passionate about building production-ready AI systems that automate real-world processes and improve decision-making.

PROJECT EXPERIENCE

LLM-Powered AI Application Development

Designed and developed AI-driven applications leveraging transformer-based models and LLM frameworks. Key Contributions:

- Integrated LLM systems with backend APIs to enable intelligent responses and real-time interaction.
- Built modular AI pipelines supporting prompt-driven workflows and intelligent inference systems.
- Developed scalable architectures for deploying AI capabilities into real applications.

Vector-Based Retrieval AI System (RAG)

Built a semantic search and contextual retrieval system using vector embeddings. Key Contributions:

- Implemented vector-based information retrieval for AI-powered applications.
- Designed knowledge retrieval architectures enabling contextual AI responses.
- Built scalable pipelines for semantic search and intelligent information retrieval.

End-to-End Machine Learning Prediction System

Developed a full ML workflow covering data preprocessing, model training, evaluation, and deployment. Key Contributions:

- Performed feature engineering and model optimization.
- Built predictive models using Scikit-learn and PyTorch.
- Deployed models via FastAPI APIs for real-time predictions.

Full-Stack AI Application (React + FastAPI)

Developed a full-stack AI-powered application integrating machine learning systems into a user-facing interface. Key Contributions:

- Built backend AI services using FastAPI.
- Implemented REST APIs enabling interaction with machine learning models.
- Designed responsive frontend interfaces using React and Tailwind CSS.
- Connected frontend applications to AI-powered backend systems.

Data Analysis & Insight Generation

Performed analytical workflows to extract insights and support model development. Key Contributions:

- Conducted Exploratory Data Analysis (EDA) using Pandas and NumPy.
- Cleaned and transformed structured datasets.
- Produced reports communicating model insights and data patterns.

EDUCATION

National Innovative Diploma (NID)

Soteria Business School

Upper Credit — GPA: 3.26

10/2020 – 07/2022

Ibadan, Nigeria

AI / Machine Learning Engineering Fellow

Publica Academy

Built solutions to solve real world problems while learning as an AI Engineer

08/2025 – 03/2026

Abeokuta, Nigeria

TECHNICAL SKILLS

Programming

Python, JavaScript

AI / LLM Engineering

LangChain, LangGraph, Transformers, Vector Embeddings, RAG Pipelines

Machine Learning

Scikit-learn, PyTorch, Model Training, Feature Engineering, Model Evaluation

AI Application Development

LLM Integration, AI APIs, Intelligent Workflows, Model Inference Systems

Backend Development

FastAPI, REST API Development, ML Model Deployment

Data Processing

Pandas, NumPy, Data Cleaning, Exploratory Data Analysis (EDA)

Frontend Development

React, Tailwind CSS

Tools

Git, Jupyter Notebook

INTERESTS

Artificial Intelligence | AI Automation Systems | Financial Technology (FinTech) |
Machine Learning Infrastructure

CORE COMPETENCIES

- | | |
|---------------------------------------|--|
| • AI Application Development | • LLM Integration & Prompt Engineering |
| • Machine Learning System Development | • Semantic Retrieval Systems (RAG) |
| • API Development for AI Systems | • Analytical Problem Solving |
