PROFESSIONAL SUMMARY

Machine Learning Engineer / AI Engineer with strong experience building end-to-end ML systems, AI-powered applications, and full-stack intelligent solutions. Skilled in developing prediction models, deploying APIs, integrating frontend interfaces, and working with transformer-based architectures. Passionate about solving real-world problems using data-driven systems and scalable AI solutions.

EDUCATION

Fellow

Publica Academy

ML Engineering/ AI Engineering

08/2025 – 03/2026

Abeokuta, Nigeria

National Innovative Diploma (NID) in Computer Software Engineering

Soteria Business School

Upper Credit – 3.26 GPA

09/2020 – 07/2022

Ibadan, Nigeria

TECHNICAL SKILLS

Programming Languages

Python, JavaScript, CSS

Machine Learning & AI

PyTorch, Transformers, Scikit-learn, LangChain, LangGraph, OpenAI API, Hugging Face, Prompt Engineering, Embeddings, Vector Databases.

Backend Development

FastAPI

Frontend Development

React, Tailwind CSS

Data & Analysis

Pandas, NumPy

Cloud/DevOps

Docker, GitHub Actions, CI/CD, AWS / Azure / GCP

Databases

PostgreSQL, MySQL, MongoDB, SQLite, Firebase

PROJECT EXPERIENCE

End-to-End Machine Learning Prediction System

- Designed and built a full ML pipeline from data preprocessing and EDA to model training and deployment.
- Implemented feature engineering and model evaluation using Scikit-learn and PyTorch.
- Exposed trained models via FastAPI endpoints for real-time predictions.
- Integrated backend with React frontend for user interaction and prediction display.

AI-Powered Transformer Application

- Built applications using Hugging Face Transformers for language modeling tasks.
- Implemented optimized model loading strategies and quantization techniques for efficient inference.
- Developed structured prompt systems for controlled output generation.

Vector Database & Retrieval System

- Developed a vector-based retrieval system for semantic search and contextual AI responses.
- Integrated embeddings with backend services for intelligent document querying.
- Designed scalable architecture for knowledge-based AI applications.

Full Stack AI Application (FastAPI + React)

- Created a production-style application with React frontend and FastAPI backend.
- Implemented proper error handling, API validation, and state management.
- Designed clean UI using Tailwind CSS for improved user experience.

Data Analysis & Model Reporting

- Performed Exploratory Data Analysis (EDA) for model building.
- Generated structured model performance reports for evaluation and optimization.
- Applied model tuning techniques to improve accuracy and generalization.
